DETAILED ACTION

This is the first office action in response to the above identified patent application filed on 3/24/04.

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-12, drawn to an apparatus for purifying a fuel, classified in class 210, subclass 774.
 - II. Claims 13-25, drawn to a combustion turbine engine, classified in class 60, subclass 039.465.
 - III. Claims 26-34, drawn to a method of conditioning a fuel, classified in class 210, subclass 767.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed for patentability because the combination has its own particular features (a plurality of cooling stages, a plurality of condensate drains, a turbine, a combustor, etc) not present in the subcombination for patentability. The subcombination has separate utility such as an apparatus for purifying any type of fuel for any type of engine.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

- 3. Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another and materially different apparatus as the one in claim 1 because, the method requires a plurality of cooling stages and a plurality of drains. These features are not required/recited in the apparatus of claim 1. Inventions III and II are unrelated because invention II refers to a combustion turbine engine while invention III is a method for conditioning a fuel for any engine, not necessarily a turbine engine.
- 4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Notice that if applicant elects group I above, there is a further restriction requirement as explained below:

5. Group I contains claims directed to the following four patentably distinct species: the species of Figure 3; the species of Figure 4; the species of Figure 5; and the species of Figure 6. The species are independent or distinct because: Figures 3 and 5 require a deep-chilling system, while Figure 4 does not, Figure 6 requires a first and second stage heat exchangers.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Contact information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William H. Rodríguez whose telephone number is 571-272-4831. The examiner can normally be reached on Monday-Friday 7:30 am to 5:00 pm.

Application/Control Number: 10/807,761

Art Unit: 3746

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Dr. Ehud Gartenberg can be reached on 571-272-4828. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
